

How to build a successful multi-actor project?

European
Commission

Target real-life
needs of end users

Choose **key actors**
with **complementary**
knowledge and skills
relevant to achieve
objectives of the
project

These actors may include:

Set up a plan with a **clear role** for each of the different actors

Organise **knowledge exchange activities** between the actors and ensure **active role** of all actors

Ensure **EU-wide communication**

If possible, involve
interactive **innovation groups**

All actors must
co-create and co-decide throughout
the project

Illustrate how the project **complements existing research** and best practices

Produce **practical information** which feeds into the most common existing dissemination channels
